

Mature Plants Missing After Migration?

Update a Single Plant

If a mature plant appears to be missing after migration, it may have migrated into the system as a **Vegetative** plant.

The plant is not lost. Follow these steps to update it to **Mature**.

1. Open **Production**.
2. Go to the **Vegetative** plants.
3. Locate the plant that should be **Mature**.
4. Select the plant.
5. Choose **Change Stage**.
6. Select **Mature** as the new stage.
7. Confirm the change.

The plant will now display in the **Mature** stage.

Update Multiple Plants Using Bulk Action

If multiple mature plants appear to be missing after migration, they may have migrated into the system as **Vegetative** plants.

The plants are not lost. You can update several plants at the same time using **Bulk Action**.

1. Open **Production**.
2. Go to the **Vegetative** plants.
3. Select each plant that should be **Mature**.
4. Select **Bulk Action**.
5. Choose **Change Stage**.
6. Select **Mature** as the new stage.
7. Confirm the change.

All selected plants will now display in the **Mature** stage.
