Technology First Spotlight Series

Jason Ray, CEO of *Simply*Home will be presenting on the benefits of sensor-based technology and remote support services that work together quietly in the background to support and enhance the lives of clients. Smart sensors, alerts, and connected devices help people stay safe and build everyday skills, while trained remote support staff are ready to respond, check in, and offer guidance when it matters. For the people we support, this means greater independence, dignity, and peace of mind. For families and provider agencies, it means more confidence that their loved ones and clients are safe, and more flexibility to focus caregiver time where personal, hands-on support makes the biggest difference.

At *Simply*Home, we believe everyone deserves the chance to live with confidence, privacy, and independence in the place they call home. We pair thoughtful technology with caring, real-time remote support so that people with disabilities and older adults can do more for themselves, with help available the moment they need it. Our approach is built around the person, not the device. We design each setup around an individual's preferences, routines, and goals so technology feels like a helpful companion rather than an intrusion.

Agenda

- **10:30 am - Welcome**
- **10:35 am - Presentation**

Why Should I Attend?

- Learn about experiences and outcomes created through Enabling Technology for individuals in New Mexico.
- Engage with other members of the New Mexico disability community on technology first approaches.
- Participate in a live demonstration given by an enabling technology vendor.
