Pro V&V attests to the following: 1) all testing prescribed by the approved and published test plan or amended test plan was performed as identified or the divergence from the test plan was properly documented in this test report, 2) all identified voting system anomalies or failures were reported and resolved, and 3) this test report is accurate and complete. There are no opinions or interpretations included in this report, except as noted under 'Recommendations'.

01	Revision Post-EAC Comments	02/22/2023
02	Revision Post-EAC Comments	03/08/2023
03	Removed incorrect information on EMS changes listed in Section 2.2.1.1	03/15/2023

TABLE OF CONTENTS

1.0   INTRODUCTION

The purpose of this Test Report is to document the procedures that Pro V&V, Inc. followed to perform certification testing during a system modification campaign for the Dominion Voting Systems Democracy Suite (D-Suite) 5.17 Voting System to the requirements set forth for voting systems in the U.S. Election Assistance Commission (EAC) 2005 Voluntary Voting System Guidelines (VVSG), Version 1.0. Certification testing of D-Suite 5.17 was performed to ensure the applicable requirements of the EAC VVSG 1.0 and the EAC Testing and Certification Program Manual, Version 3.0 were met. Additionally, all EAC Request for Interpretations (RFI) and Notices of Clarification (NOC) relevant to the system under test were incorporated in the test campaign.

Prior to submitting the voting system for testing, Dominion Voting Systems submitted an application package to the EAC for certification of the D-Suite 5.17 Voting System. The application was accepted by the EAC and the project was assigned the unique Project Number of DVS-DemSuite5.17.

The D-Suite 5.17 EAC-approved test plan, available for viewing on the EAC's website at www.eac.gov, was utilized as the guiding document during test performance. Since test plan approval, and as testing progressed, minor system modifications, such as revised system documentation, were incorporated. This test report reflects all of the testing completed and details the final versions of all technical documentation and system components and supersedes the approved test plan.

Unless otherwise annotated, all testing was conducted at the Pro V&V test facility located in Huntsville, AL, by personnel verified by Pro V&V to be qualified to perform the test.

1.1   Description and Overview of EAC Certified System Being Modified

The D-Suite 5.17 Voting System is a paper-based optical scan voting system. The D-Suite 5.17 consists of the following major components: The Election Management System (EMS), the ImageCast Central (ICC), the ImageCast Precinct (ICP and ICP2), ImageCast X (ICX) VVPAT BMD, ImageCast Evolution (ICE), and the ImageCast X (ICX) BMD. The D-Suite 5.17 Voting System configuration is a modification from the EAC approved D-Suite 5.5-D system configuration.

1.1.1   Baseline Certified System

The EAC Certified System that is the baseline for the submitted modification is described in the following subsections. All information presented was derived from the previous Certification Test Report, the EAC Certificate of Conformance and/or the System Overview.

The baseline system for this modification is the D-Suite 5.5-D Voting System. The D-Suite 5.5-D Voting System is a paper-based optical scan voting system with a hybrid paper/DRE option consisting of the following major components: The Election Management System (EMS), the ImageCast Central (ICC), the ImageCast Precinct (ICP and ICP2), the ImageCast Evolution

(ICE), the ImageCast X (ICX) DRE w/ Reports Printer, ImageCast X (ICX) DRE w/ voter-verifiable paper audit trail (VVPAT), and the ImageCast X ballot marking device (BMD).

Detailed descriptions of the D-Suite 5.5-D test campaign are contained in Pro V&V Report No.TR-01-01-DVS-49-01.04, available for viewing on the EAC's website at www.eac.gov.

The following paragraphs provide a brief description of the baseline system components.

Election Management System (EMS)

The D-Suite 5.5-D EMS consists of various components running as either a front-end/client application or as a back-end/server application. A listing of the applications and a brief description of each is presented below.

Front-end/Client applications:

- EMS Adjudication: Represents the client component responsible for adjudication, including reporting and generation of adjudicated result files from ImageCast Central tabulators and adjudication of write-in selections from ImageCast Precinct and ImageCast Central tabulators. This client component is installed on both the server and the client machines.

- EMS Audio Studio: A client application that represents an end-user helper application used to record audio files for a given election project. As such, it is utilized during the pre-voting phase of the election cycle.

- EMS Election Data Translator: End-user application used to export election data from election project and import election data into election project.

- EMS Election Event Designer: A client application that integrates election definition functionality together with ballot styling capabilities and represents a main pre-voting phase end-user application

- ImageCast Voter Activation: An application, installed on a workstation or laptop at the polling place, which allows the poll workers to program smart cards for voters. The smart cards are used to activate voting sessions on ImageCast X.

- EMS Results Tally and Reporting: A client application that integrates election results acquisition, validation, tabulation, reporting, and publishing capabilities and represents the main post-voting phase end-user application.

Back-end/Server applications:

- EMS Adjudication Service: Represents a server side application which provides ballot information such as contests, candidates and their coordinates from EMS to the Adjudication application.

- EMS Application Server: Represents a server side application responsible for executing long running processes, such as rendering ballots, generating audio files and election files, etc.

- <u>EMS Database Server:</u> Represents a server side RDBMS repository of the election project database which holds all the election project data, including pre-voting and post-voting data.

- <u>EMS Data Center Manager:</u> A server application that represents a system level configuration application used in EMS back-end data center configuration.

- <u>EMS File System Service:</u> A back-end application that acts as a stand-alone service that runs on client machines, enabling access to low level operating system API for partitioning CF cards, reading raw partition on ICP CF card, etc.

- <u>EMS NAS Server:</u> Represents a server side file repository of the election project file based artifacts, such as ballots, audio files, reports, log files, election files, etc.

- <u>Smart Card Helper Service:</u> A service that is installed on a workstation or laptop at the polling place, and provides required data format for programming smart cards for ImageCast devices, or, for jurisdiction's voting registration system in case of integration.

ImageCast Precinct (ICP)

The ImageCast Precinct (ICP) device is a precinct optical scan ballot counter designed to provide three major functionalities: ballot scanning and tabulation, accessible voting, and ballot review and second chance voting. The ICP is used in conjunction with ImageCast compatible ballot storage boxes. The system is designed to scan marked paper ballots printed on standard or secure paper stock, interpret voter marks on the paper ballot, and safely store and tabulate each vote from each paper ballot. The ICP also supports enhanced accessibility voting through optional accessories connected to the ImageCast unit.

ImageCast Precinct (ICP2)

The ImageCast Precinct (ICP2) device is a precinct-based optical scan ballot counter designed to provide two major functionalities: ballot scanning and tabulation and ballot review and second chance voting. The ICP2 is used in conjunction with ImageCast compatible ballot storage boxes. The system is designed to scan marked paper ballots printed on standard or secure paper stock, interpret voter marks on the paper ballot, and safely store and tabulate each vote from each paper ballot.

ImageCast Evolution (ICE)

The ICE device is a precinct-level optical scan ballot counter designed to perform three major functions: ballot scanning and tabulation, ballot review and second chance voting, and accessible voting and ballot marking. The ICE is used in conjunction with ImageCast compatible ballot storage boxes. The system is designed to scan marked paper ballots printed on standard or secure paper stock, interpret voter marks on the paper ballot, and safely store and tabulate each vote from each paper ballot. The ICE also supports enhanced accessibility voting through optional accessories connected to the ImageCast unit.

ImageCast Central (ICC) Count Scanner

The ImageCast Central (ICC) is a high-speed, central ballot optical scan tabulator based on Commercial off the Shelf (COTS) hardware, coupled with the custom-made ballot processing application software. It is used for high speed scanning and counting of paper ballots.

ImageCast X (ICX)

The Democracy Suite ImageCast X (ICX) consists exclusively of COTS available hardware and operating system, while the applications installed on top customize its behavior to turn it into a Ballot Marking Device (BMD) or a DRE with VVPAT or Report Printer and Tabulator device. ICX application is the application that verifies voter's session eligibility, using the smart card and then presents the appropriate ballot to the voter. When a voter is satisfied with choices selected, ICX application verifies them and produces a marked printed ballot or stores the votes onto a memory device. The ICX is designed to perform the following functions:

- Ballot marking and printing of electronic mobile ballots (in BMD mode)
- Ballot review and second chance voting
- Accessible voting and ballot marking
- Saving voting results (in VVPAT DRE or Report Printer mode)
- Printing votes on a voter verifiable paper audit trail device (when VVPAT is in use)

1.3   Terms and Abbreviations

This subsection lists terms and abbreviations relevant to the hardware, the software, or this Test Plan.

"ADA" – Americans with Disabilities Act 1990

"BMD" – Ballot Marking Device

"CM" – Configuration Management

"COTS" – Commercial Off-The-Shelf

"DRE" – Direct Record Electronic

"EAC" – United States Election Assistance Commission

"EMS" – Election Management System

"FCA" – Functional Configuration Audit

"HAVA" – Help America Vote Act

"ICC" – ImageCast Central

"ICE" – ImageCast Evolution

"ICP" – ImageCast Precinct

"ICP2" – ImageCast Precinct 2

"ICX" – ImageCast X

"ISO" – International Organization for Standardization

"NOC" – Notice of Clarification

"PCA" – Physical Configuration Audit

"QA" – Quality Assurance

"RFI" – Request for Interpretation

"TDP" – Technical Data Package

"UPS" – Uninterruptible Power Supply

"VSTL" – Voting System Test Laboratory

"VVPAT" – Voter Verifiable Paper Audit Trail

"VVSG" – Voluntary Voting System Guidelines

2.0 CERTIFICATION TEST BACKGROUND

The Dominion Democracy Suite 5.17 system is a modification of a previously certified system (D-Suite 5.5-D). Pro V&V performed an evaluation of results from the previous test campaign to determine the scope of testing required for certification of the D-Suite 5.17. Based on this evaluation, Pro V&V determined that testing from the previous test campaign would establish the baseline and that the focus of this test campaign would be on the documented system updates.

2.1 Revision History
The table below details the version history of the D-Suite 5.17 System:

Table 2-1. D-Suite 5.5-D System Revision History

System Version	Certification Type	Baseline System	Certification Number
D-Suite 5.0	New System	--- (Original System)---	DVS-DemSuite5.0
D-Suite 5.5	Modification	D-Suite 5.0	DVS-DemSuite5.5
D-Suite 5.5-B	Modification	D-Suite 5.5	DVS-DemSuite5.5-B
D-Suite 5.5-C	Modification	D-Suite 5.5-B	DVS-DemSuite5.5-C
D-Suite 5.5-D	Modification	D-Suite 5.5-C	DVS-DemSuite5.5-D
D-Suite 5.17	Modification	D-Suite 5.5-D	DVS-DemSuite5.17*

*Upon grant of certification by the EAC

2.2 Scope of Testing

D-Suite 5.17 is a modified voting system configuration that includes functional upgrades and modifications to the baseline system. Modified system testing is an abbreviated testing campaign built upon a regression review of the modifications against the baseline-system and requirements. Modifications, alone and collectively, are reviewed (tested) to see if they fall under any requirement(s), or functionally impact the ability of the modified system to continue to meet requirements. Regression reviews consist of targeted investigations to determine if further testing is necessary based on the nature and scope of the communicated modifications (whether activated or deactivated), and any other submitted information. The objective of regression testing is to establish assurance that the modifications have no adverse impact on the compliance, integrity, or performance of the system. Regression testing for this test campaign consisted of the execution of the System Integration Testing.

Testing from the previous test campaign was used to establish the baseline. The scope of testing focused on the functional updates and modifications. To evaluate the D-Suite 5.17 test requirements, the submitted modifications were evaluated against each section of the EAC 2005 VVSG to determine the applicable tests to be performed.

Based on this assessment, it was determined that multiple areas within the EAC 2005 VVSG would be evaluated to encompass the required tests. A breakdown of the areas and associated tests is listed below:

- EAC 2005 VVSG Volume 1, Section 2: Functional Requirements
    - System Level Testing
        - System Integration Testing
        - Accuracy Testing
        - Volume & Stress
    - Functional Configuration Audit (FCA)
    - Physical Configuration Audit (PCA), including System Loads & Hardening
    - Technical Documentation Package (TDP) Review

- EAC VVSG 1.0 Volume 1, Section 3: Usability & Accessibility
    - Usability & Accessibility Testing
    - Technical Documentation Package (TDP) Review

- EAC VVSG 1.0 Volume 1, Section 4: Hardware Requirements
    - Electrical Tests
    - Environmental Tests
    - Technical Documentation Package (TDP) Review

- EAC 2005 VVSG Volume 1, Section 5: Software Requirements
    - Source Code Review, Compliance Build, Trusted Build, and Build Document Review
    - Technical Documentation Package (TDP) Review
    - Functional Configuration Audit (FCA) including Regression Testing

- EAC VVSG 1.0 Volume 1, Section 7: Security Requirements
    - Security Testing
    - Technical Documentation Package (TDP) Review

Note: Section 6 (Telecommunications Requirements) of the VVSG 1.0 is not applicable to D-Suite 5.17 and was therefore not included in testing. Additionally, Section 8 (Quality Assurance Requirements, and Section 9 (Configuration Management Requirements) were reviewed in previous test campaigns and were not impacted by the submitted modifications.

2.2.1 Modification Overview

The Dominion Democracy Suite 5.17 Voting System is a modified voting system configuration that includes upgrades to the components of the D-Suite 5.5-D Voting System. Section 2.2.1.1 details changes between this system and the baseline of the Democracy Suite 5.5-D Voting System. The primary purpose of this modification was to add functional updates and modifications.

To verify the modifications were successfully addressed throughout the test campaign, each modification was tracked and verified to be addressed during the execution of the relevant test area. For example, source code changes were verified during the source code review. Modifications requiring functional test verification were evaluated by executing the standard Accuracy Test, the System Integration Test, or during performance of the FCA. Modifications that were not adequately evaluated during the performance of these tests were subjected to specifically designed test cases. Additionally, Pro V&V functionally verified that any corrected issues from the baseline system were not present in the modified system and that all enhancements implemented did not adversely impact system performance.

2.2.1.1 Detailed List of Changes

The list below includes changes between the current D-Suite 5.17 system and the baseline of the Democracy Suite 5.5-D Voting System, as taken from the *System Change Notes*:

General System Changes

- System and security updates to Democracy Suite:

    ― Upgrade to Windows Server 2019 and SQL Server 2019

    ― New tool for performing automated hardening procedure of all Windows-based components

    ― Additional encryption of election databases on ICE, ICP2 and ICX

    ― ICX Smart Card Mutual Authentication and Secure Messaging

- Added support for Provisional Voting with ICX BMD and QR ballots

- Added support for ICX BMD to produce a Uniform Ballot

- Added additional election-specific information to the barcode on paper ballots

- Added support for Batch and Summary Cards in Election Event Designer and ICC

- Added ability in Election Event Designer to configure the number of columns a contest should occupy on the ICX screen

- Improved pseudo random number algorithm

- Added ability to export server certificates for previously imported encrypted projects

<u>EMS</u>

- System and security updates to the EMS system:

  — Expanding the use of Trusted Certificates

  — Additional Software Encryption of the SQL Database

  — Blocked auto-play for all external media

- Modified UI for managing tabulators

- Election Event Designer updates:

  — Added support for creating watermark images for paper ballot header, footer, and stubs

  — Added information about status of election files in the Tabulator list to indicate whether election media has been programmed or needs to be re-programmed

  — Improvement to election file generation

- Results Tally & Reporting updates:

  — Updated reporting module

  — Added option to redact low turnout by precinct and/or counting group from CVR export for Primary elections

<u>Adjudication</u>

- Added an option to prevent adjudicators from adjudicating contests which do not meet selected out-stack conditions for the project

- New Adjudication Activity Log Report and Export

- Added ability to perform Database Back-ups and Maintenance Procedure

<u>ICC</u>

- Add a configuration setting to force save both sides of the ballot for single sided ballots

- Poll ID field extended from 6 characters in length to 10

- Added a Status/Interrupt Report

- Updated application to support HiPro Firmware version 1.0.1074

ICE

- Ability to display instructional text or contest heading on ICE Screen

ICP2

- Introduced option to specify a different passcode for the Poll Close action

- Added a warning during poll-closing procedure reminding the Poll Worker to ensure that the Auxiliary Bin is empty.

- Added monitoring of the printer sensor to ensure the printer head is in the correct place

- Prevented the Calibration Buttons from lighting up after the Poll has opened

ICX

- System and Security updates to the ICX product:

  ― Upgrade to Android version 8.1

  ― Obfuscation of Source Code

  ― Added tabulator serial number to the result files

  ― Support for Poll Worker and Technician Card expiration date

  ― Additional USB models added to list of accepted devices

- Added support for following BMD Printers:

  ― Avision AP3061

  ― HP M404dn

  ― HP 4001dn

- Ability to choose if the text size selected on the screen is printed on the BMD QR ballot or not

- Allow Poll Worker to cast a fleeing voter ballot

- New Firmware version 169 for VVPAT V1 and V1C

- Updates to printed content for VVPAT:

  ― Option to not print Total Ballots Cast in report footer

  ― Option to print Party information for Primaries

  ― Precinct ID changed to Precinct Name

- Reduced amount of paper used when printing on VVPAT

- Removed ability to print Zero Report after ballots have been cast in VVPAT BMD mode

2.2.2 Block Diagram

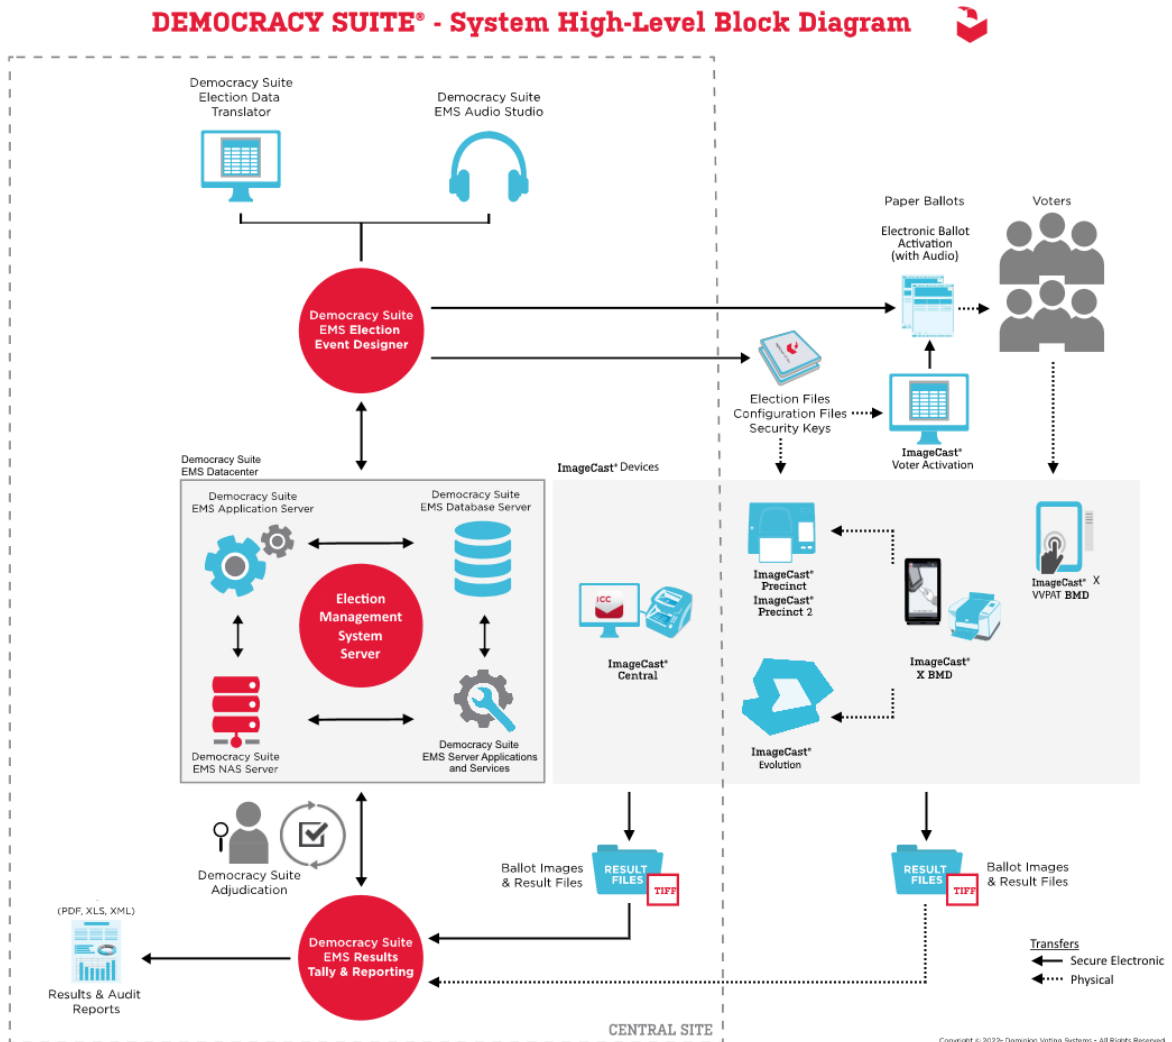

Figure 2-1. D-Suite 5.17 System Overview

2.2.3 System Limits

The system limits verified to be supported by the D-Suite 5.17 System during this test campaign or during testing of the baselined system are provided in Table 2-2.

Table 2-2. D-Suite 5.17 System Limits

Characteristic	Limit by Configuration		Limiting Component
	Express	**Standard**	
Ballot positions	462**/292*	462**/292*	22-inch Ballot
Precincts in an election	250	1000	Memory
Contests in an election	250	1000	Memory
Candidates/Counters in an election	2500	10000	Memory
Candidates/Counters in a precinct	462**/240*	462**/240*	22-inch Ballot
Candidates/Counters in a tabulator	2500	10000	Memory
Ballot Styles in an election	750	3000	Memory
Contests in a ballot style	156**/38*	156**/38*	22-inch Ballot
Candidates in a contest	231**/240*	231**/240*	22-inch Ballot
Ballot styles in a precinct	5	5	Memory
Number of political parties	30	30	Memory
"Vote for" in a contest	30**/24*	30**/24*	22-inch Ballot
Supported languages in an election	5	5	Memory
Number of write-ins	462**/24*	462**/24*	22-inch Ballot

* Reflects the system limit for a ballot printed in landscape

** Reflects the system limit for a ballot printed in portrait.

2.2.4 Supported Languages

Support for the following languages was verified during this test campaign or during testing of the baselined system:

Table 2-3. D-Suite 5.17 Supported Languages

Language	ICE	ICP	ICP2	ICX
Alaska Native	Yes, if using Latin alphabet	Yes	No	No
Apache	Audio only	Audio only	No	No
Bengali	Yes	Yes	Yes	Yes
Chinese	Yes	Yes	Yes	Yes
English	Yes	Yes	Yes	Yes
Eskimo	Yes, if using Latin alphabet	Yes	No	No
Filipino	Yes, if using Latin alphabet	Yes	Yes	No
French	Yes	Yes	No	Yes
Hindi	Yes	Audio only	Yes	Yes
Japanese	Yes	Yes	Yes	Yes
Jicarilla	Audio only	Audio only	No	No
Keres	Audio only	Audio only	No	No
Khmer	Yes	Audio only	No	No

Table 2-3. D-Suite 5.17 Supported Languages *(continued)*

Language	ICE	ICP	ICP2	ICX
Korean	Yes	Yes	Yes	Yes
Navajo	Audio only	Audio only	No	No
Seminole	Audio only	Audio only	No	No
Spanish	Yes	Yes	Yes	Yes
Tagalog	No	No	No	Yes
Thai	Yes	Audio only	Yes	Yes
Towa	Audio only	Audio only	No	No
Ute	Audio only	Audio only	No	No
Vietnamese	Yes	Yes	Yes	Yes
Yuman	Audio only	Audio only	No	No

Support for all stated languages was verified; however, only English and Spanish language ballots were cast during the performance of functional testing. Additionally, one character based language (Chinese) was tested during System Integration Testing.

For the character based language, the ballot was created by Pro V&V and voted utilizing both paper ballots and ADA voting devices along with all applicable peripherals. The Chinese Language for the ballot was created using a readily available online translation tool. The translated language text was entered into the Election Event Designer Application. A ballot preview was generated in the EED application. The Chinese characters displayed in the ballot preview were compared to the characters generated by the online translation tool, to ensure that the characters matched. The ballots were then generated and printed, and the election loaded onto the tabulators and the BMD units. The Chinese characters displayed on both the printed ballots and displayed on the BMD units were compared to the original Chinese Characters generated by the online translation tool to verify that the characters matched.

2.2.5 Supported Functionality

The D-Suite 5.17 was verified to support the following voting variations:

- General Election
- Closed Primary
- Open Primary
- Early Voting
- Partisan/Non-Partisan Offices
- Write-In Voting
- Primary Presidential Delegation Nominations
- Split Precincts
- Vote for N of M
- Ballot Rotation
- Provisional or Challenged Ballots

Although the components of the D-Suite 5.17 are capable of supporting Ranked Choice Voting and Recall Issues, these functionalities are not included in the configuration submitted for certification testing.

2.2.6 VVSG

The D-Suite 5.17 Voting System was evaluated against the relevant requirements contained in the EAC 2005 VVSG, Version 1.0. To evaluate the D-Suite 5.17 test requirements, the submitted modifications were evaluated against each section of the EAC VVSG 1.0 to determine the applicable tests to be performed. All requirements that were excluded from the previous test campaign (D-Suite 5.5-D) were also deemed not applicable to this test campaign. These requirements, along with the rationale for not evaluating the system to the identified section, are identified below:

- Volume I, Section 6.2.6 (Telecommunications Requirements: Integrity)

    o *These requirements are written for use of public networks. The D-Suite 5.17 does not utilize public networks*

- Volume I, Section 7.5.2-7.5.4 (Security: Protection Against External Threats, Monitoring and Responding to External Threats, and Shared Operating Environment)

    o *These requirements are written for use of public networks. The D-Suite 5.17 does not utilize public networks*

- Volume I, Section 7.6 (Use of Public Communications Networks)

    o *D-Suite 5.17 does not support transmission over public networks.*

- Volume I, Section 7.7 (Wireless Communications)

    o *No wireless technology is utilized in this system.*

Additionally, the submitted modifications did not require the evaluation of any requirements that were not included in the baseline system.

2.2.7 RFIs

There are no RFIs released by the EAC as of the date of this Test Report that pertain to this test campaign that were not in effect at the time of the baseline system certification.

2.2.8 NOCs

There are no NOCs released by the EAC as of the date of this Test Report that pertain to this test campaign that were not in effect at the time of the baseline system certification.

3.0   TEST FINDINGS AND RECOMMENDATION

The D-Suite 5.17 Voting System was evaluated against the relevant requirements contained in the EAC 2005 VVSG, Volumes I and II. The test campaign focused on the submitted updates and modifications. The summary findings and recommendations for each area of testing are provided in the following sections.

3.1   Summary Findings and Recommendation

Summary findings for the System Level Testing (System Integration Testing, Accuracy Test, Volume & Stress Testing, and FCA), Hardware Testing (Electrical, Operational Environmental, and Electrical Supply), Usability/Accessibility Testing, and Source Code Review are detailed in the relevant sections of this report. In addition to these areas of testing, a PCA (including System Loads & Hardening) and a TDP Review were performed, as described below.

3.1.1   Physical Configuration Audit (PCA)

The Physical Configuration Audit (PCA) compares the voting system components submitted for qualification to the manufacturer's technical documentation, and shall include the following activities:

- Establish a configuration baseline of software and hardware to be tested; confirm whether manufacturer's documentation is sufficient for the user to install, validate, operate, and maintain the voting system

- Verify software conforms to the manufacturer's specifications; inspect all records of manufacturer's release control system; if changes have been made to the baseline version, verify manufacturer's engineering and test data are for the software version submitted for certification

- If the hardware is non-COTS, Pro V&V shall review drawings, specifications, technical data, and test data associated with system hardware to establish system hardware baseline associated with software baseline

- Review manufacturer's documents of user acceptance test procedures and data against system's functional specifications; resolve any discrepancy or inadequacy in manufacturer's plan or data prior to beginning system integration functional and performance tests

- Subsequent changes to baseline software configuration made during testing, as well as system hardware changes that may produce a change in software operation are subject to re-examination

Summary Findings

During execution of the PCA, the components of the D-Suite 5.17 were documented by component name, model, serial number, major component, and any other relevant information needed to identify the component. For COTS equipment, every effort was made to verify that the COTS equipment had not been modified for use.

Additionally, each technical document submitted in the TDP was recorded by document name, description, document number, revision number, and date of release. At the conclusion of the test campaign, test personnel verified that any changes made to the software, hardware, or documentation during the test process were fully and properly documented.

3.1.2 TDP Review

In order to determine compliance of the modified TDP documents with the EAC 2005 VVSG, a limited TDP review was conducted. This review focused on TDP documents that have been modified since the certification of the baseline system. The review consisted of a compliance review to determine if each regulatory, state, or manufacturer-stated requirement had been met based on the context of each requirement. Results of the review of each document were entered on the TDP Review Checklist and reported to the manufacturer for disposition of any anomalies. This process was ongoing until all anomalies were resolved. Any revised documents during the TDP review process were compared with the previous document revision to determine changes made, and the document was re-reviewed to determine whether subject requirements had been met.

<u>Summary Findings</u>

The submitted TDP was determined to be in compliance with the requirements set forth in the EAC 2005 VVSG. A listing of all documents contained in the D-Suite 5.17 TDP is provided in Table 3-1.

Table 3-1. D-Suite 5.17 TDP Documents

3.1.3 Source Code Review, Compliance Build, Trusted build, and Build Documentation Review

Pro V&V reviewed the submitted source code to the EAC 2005 VVSG and the manufacturer-submitted coding standards. Prior to initiating the software review, Pro V&V verified that the submitted documentation was sufficient to enable: (1) a review of the source code and (2) Pro V&V to design and conduct tests at every level of the software structure to verify that design specifications and performance guidelines are met.

For the ICE software, a combination of Automated Source Code Review and Manual Source Code Review methods was used to review the source code. For all other components, the submitted source code was compared to the previously certified Democracy Suite 5.5-D voting system versions to determine the changes, if any. A combination of Automated Source Code Review and Manual Source Code Review methods was used to review the changes in the source code. In addition, 10% of the source code comments from the new source code were manually reviewed.

Summary Findings

- Automated Source Code Review: The Automated Source Code Review was performed to review the changes in the source code from the previously certified voting system. No source code issues were found during the Automated Source Code review.

- Manual Source Code Review: The Manual Source Code review was performed on 10% of the comments from the new source code for compliance to VVSG Volume Section 5.2.7. No source code issues were found during the Manual Source Code review. Additionally, a manual source code review was performed to verify the following two modifications:

  o Additional encryption of election databases on ICE, ICP2 and ICX

  o ICX Smart Card Mutual Authentication and Secure Messaging

  These two enhancements were tested during execution of all test cases run during the test campaign, as a specific functional test case could not be developed to evaluate the changes.

- Compliance Build: The compliance build was performed following the compliance review. Once the compliance review was performed and the source was deemed stable enough to proceed with testing, the source code and all additional packages were compiled into a Compliance Build.

- Trusted Build: The trusted build consisted of inspecting customer submitted source code, COTS, and Third Party software products and combining them to create the executable code. This inspection followed the documented process from the "United States Election Assistance Commission Voting System Testing and Certification Program Manual" Section 5.5 – 5.7. Performance of the trusted build includes the build documentation review. The Trusted Build was performed following the completion of the Functional Configuration Audit.

3.1.4 System Level Testing

System Level testing was implemented to evaluate the complete system. This testing included all proprietary components and COTS components (software, hardware, and peripherals) in a configuration of the system's intended use. For software system tests, the tests were designed according to the stated design objective without consideration of its functional specification. The system level hardware and software test cases were prepared independently to assess the response of the hardware and software to a range of conditions. Pro V&V reviewed the manufacturer's program analysis, documentation, and module test case design and evaluated the test cases for each module with respect to flow control parameters and entry/exit data.

System Level Testing for this campaign included the evaluations of the following test areas: FCA, Accuracy Testing, System Integration Testing, and Volume & Stress. Each of these areas is reported in detail in the subsections that follow.

Pro V&V defined the expected result for each test and the ACCEPT/REJECT criteria for certification. If the system performed as expected, the results were accepted. If the system did not perform as expected, an analysis was performed to determine the cause. If needed, the test was repeated in an attempt to reproduce the results. If the failure could be reproduced and the expected results were not met, the system was determined to have failed the test. If the results could not be reproduced, the test continued. Any errors encountered were documented and tracked through resolution.

3.1.4.1 Functional Configuration Audit (FCA)

The Functional Configuration Audit (FCA) encompasses an examination of manufacturer's tests, and the conduct of additional tests, to verify that the system hardware and software perform all the functions described in the manufacturer's documentation submitted in the TDP. In addition to functioning according to the manufacturer's documentation tests will be conducted to ensure all applicable EAC 2005 VVSG requirements are met.

The FCA for this test campaign included an assessment of the submitted modifications and included inputs of both normal and abnormal data during test performance. This evaluation utilized baseline test cases as well as specifically designed test cases and included predefined election definitions for the input data:

- FCA-VVSG Testing: Each component of the system was evaluated against a standardized test-case suite centered upon requirements stated in the VVSG and administered through a test-management software tool. All applicable tests-cases were performed while any non-applicable test-cases were logged as "n/a" for substantiation. The system operations and functional capabilities were categorized in the tool as follows by the phase of election activity in which they are required:

  o Pre-voting Capabilities: These functional capabilities are used to prepare the voting system for voting. They include ballot preparation, the preparation of election-specific software (including firmware), the production of ballots, the installation of ballots and ballot counting software (including firmware), and system and equipment tests.

- o <u>Voting System Capabilities</u>: These functional capabilities include all operations conducted at the polling place by voters and officials including the generation of status messages.

- o <u>Post-voting Capabilities</u>: These functional capabilities apply after all votes have been cast. They include closing the polling place; obtaining reports by voting machine, polling place, and precinct; tabulation of paper ballots at the central location; accumulation of results from all voting methods; obtaining consolidated reports; and obtaining reports of audit trails.

- – <u>FCA-Claims Testing:</u> System user instructions and procedures found in the TDP were followed to verify their accuracy and completeness. In addition any functional claims discovered in the TDP that were not specifically examined in other areas or that were items of interest were also tested.

- – <u>FCA-Mapping:</u> Any modified functional paths (buttons, dropdowns, etc.) were mapped by qualified VSTL personnel, to help ensure all functional options had been noted and exercised. Any items of interest were examined and/or tested.

All issues (if any) found during these efforts are detailed in Section 3.3. Any issues noted were tracked using an issue tracking software program and issue tracking spreadsheets.

<u>Summary Findings</u>

All functional tests were successfully executed. During execution of the test procedure, it was verified that the D-Suite 5.17 System successfully completed the system level integration tests with all actual results obtained during test execution matching the expected results.

3.1.4.2 Accuracy

The accuracy test ensures that each component of the voting system can each process at least 1,549,703 consecutive ballot positions correctly within the allowable target error rate. The Accuracy test is designed to test the ability of the system to "capture, record, store, consolidate and report" specific selections and absences of a selection. The required accuracy is defined as an error rate. This rate is the maximum number of errors allowed while processing a specified volume of data. For paper-based voting systems the ballot positions on a paper ballot must be scanned to detect selections for individual candidates and contests and the conversion of those selections detected on the paper ballot converted into digital data.

For paper-based voting systems the ballot positions on a paper ballot must be scanned to detect selections for individual candidates and contests and the conversion of those selections detected on the paper ballot converted into digital data. The accuracy requirements for the ICC, ICP, ICP2, and ICE units were met by the execution of the standard accuracy test utilizing pre-marked and hand-marked ballots of each ballot length supported by the system, and ballots produced by the ICX BMD. The accuracy requirements for the ICX VVPAT BMD were met by using the built-in vote simulation tool to cast votes on the device.

<u>Summary Findings</u>

The accuracy requirements for the ICC, ICP, ICP2, and ICE units were met by the execution of the standard accuracy test utilizing hand-marked (70%) and pre-marked (30%) ballots of each ballot length supported by the system, and ballots produced by the ICX BMD. The accuracy requirements for the ICX VVPAT BMD were met by using the built-in vote simulation tool to cast votes on the device.

3.1.4.3 System Integration

System Integration is a system level test for the integrated operation of both hardware and software. System Integration evaluates the compatibility of the voting system software components or subsystems with one another, and with other components of the voting system environment. This compatibility was determined through functional tests integrating the voting system software with the remainder of the system. During test performance, the system was configured exactly as it would for normal field use. This included connecting all supporting equipment and peripherals including ballot boxes, voting booths (regular and accessible), and any physical security equipment such as locks and ties.

During System Integration testing, two General Elections and two Primary Elections were successfully exercised on the voting system, as described below:

Two general elections with the following breakdowns:

— General Election GEN-01: A General Election with Straight Party held in four precincts, one of which is a split precinct. This election contains nineteen contests compiled into four ballot styles. Five of the contests are in all four ballot styles. The other fourteen contests are split between at least two of the precincts with a maximum of four different contest spread across the four precincts.

— General Election GEN-03: A General Election held in two precincts. This election contains eight contests and compiled into two ballot styles. Four of the contests are in both ballot styles. The other four contests are split between the two precincts. This election is designed to functionally test the handling of multiple ballot styles, support for at least three languages including a character-based language, support for common voting variations, and audio support for at least three languages and an ADA binary input device.

Two primary elections with the following breakdowns:

— Primary Election PRIM-01: This election is designed to functionally test a Closed Primary Election with multiple ballots and support for common voting variations. This election contains thirty-one contests and six parties compiled into eighteen ballot styles, each ballot containing six contests.

— Primary Election PRIM-03: A Closed Primary Election held in two precincts. This election contains ten contests and is compiled into two ballot styles.

Two of the contests are in both ballot styles. The other eight contests are split between the two parties' ballots. This election is designed to functionally test the handling of multiple ballot styles, support for at least three languages including a character-based language, support for common voting variations, and audio support for at least three languages and an ADA binary input device

<u>Summary Findings</u>

The D-Suite 5.17 System successfully passed the System Integration Test. During execution of the test procedure, it was verified that the D-Suite 5.17 System successfully completed the system level integration tests with all actual results obtained during test execution matching the expected results.

3.1.4.4 Volume & Stress

The Volume & Stress test investigates the system's response to conditions that tend to overload the system's capacity to process, store, and report data. The test parameters focused on the system's stated limits and the ballot logic for areas such as the maximum number of active voting positions, maximum number of ballot styles, maximum candidates, maximum contests, and stated limits within the EMS. This test was utilized to ensure the system can achieve the manufacturer's TDP claims of what the system can support. Testing was performed by exercising multiple election definitions developed specifically to test for volume and stress conditions of the system being tested.

<u>Summary Findings</u>

The D-Suite 5.17 System successfully passed the Volume & Stress Test. During execution of the test procedure, it was verified that the D-Suite 5.17 System successfully completed the tests with all actual results obtained during test execution matching the expected results.

3.1.5 Security Functions

The objective of the Security Testing is to evaluate the effectiveness of the voting system in detecting, preventing, recording, reporting, and recovering from security threats. To evaluate the integrity of the system, Pro V&V developed specifically designed test cases in an attempt to defeat the access controls and security measures documented in the system TDP. The test methods for performing the Security Testing were execution and review.

<u>Summary Findings</u>

Prior to performance of Security testing, the examiner verified that security hardening scripts had been properly applied to system components per the system documentation. During the security testing, the system was inspected for various controls and measures that are in place to meet the objectives of the security standards which include: protection of the critical elements of the voting system; establishing and maintaining controls to minimize errors; protection from intentional manipulation, fraud and malicious mischief; identifying fraudulent or erroneous changes to the voting system; and protecting the secrecy in the voting process.

Following the documented procedures, the examiner configured the voting system for use and functionality and verified documented controls were in place and adequate and met the stated requirements.

Physical Security was tested by setting up the system as described in the TDP and then examining the effectiveness and comprehensiveness of physical security measures. Administrative Security was tested by examining the system's documented security instructions and procedures for effectiveness and breadth. Logical security was tested as part of FCA testing. Logical security testing assessed the effectiveness of the security hardening scripts applied during the system setup and install process.

Additional reviews were performed on the implementation of the FIPS cryptographic module in order to:

- Confirm the module (model and version) that is used and implemented is present on the NIST CMVP validated products list.

- Confirm the module in all five instances is configured and used per the NIST published security policy for that module.

The submitted threat matrix identifying the system's risks and vulnerabilities was evaluated for completeness and to determine that mitigating controls were adequately implemented. An evaluation of the system was accomplished by utilizing a combination of functional testing and source code review. All findings were reported to the EAC and Dominion.

3.1.6   Hardware Testing

Previous hardware examinations were performed on the certified baseline system (D-Suite 5.5-D). The ICX updates to the allowable COTS printer models required the following hardware testing to be performed.

Electrical Tests:

- Electrical Power Disturbance

- Electromagnetic Radiation

- Electrostatic Disruption

- Electromagnetic Susceptibility

- Electrical Fast Transient

- Lightning Surge

- Conducted RF Immunity

- Magnetic Fields Immunity

- Electrical Supply

Environmental Tests:

- Temperature Power Variation

Pro V&V utilized third party testing during the performance of hardware testing. All hardware testing was performed at the NTS Longmont facility located in Longmont, Colorado. All testing at the NTS Longmont facility was witnessed on-site by Pro V&V personnel, with the exception of Temperature Power Variation Test in which Pro V&V qualified staff executed all testing.

Summary Findings

Electrical Testing was performed on the D-Suite 5.17 components listed above. The procedures and results for this testing are included in the following NTS Test reports:

- ITR-PR165251, Revision 0, presented in Appendix A-1
- ETR-PR165251, Revision 0, presented in Appendix A-1

The test results from this testing are summarized below:

Table 3-2. Electrical Hardware Test Results

Standard/Method	Description	Criteria	Class/Level	Result
FCC 15.107 ICES-003 VVSG Vol. 1 4.1.2.9	Power Line Conducted Emissions	Normal Operation & No Data Loss	Class B	Pass
FCC 15.109 ICES-003 VVSG Vol. 1 4.1.2.9	Radiated Emissions	Normal Operation & No Data Loss	Class B	Pass
EN61000-4-11 VVSG Vol. 1 4.1.2.5	Electrical Power Disturbance	Normal Operation & No Data Loss	Various	Pass
EN61000-4-4 VVSG Vol. 1 4.1.2.6	Electrical Fast Transient	Normal Operation & No Data Loss	±2kV - Mains	Pass
EN61000-4-5 VVSG Vol. 1 4.1.2.7	Lightning Surge	Normal Operation & No Data Loss	±2kV Line - Line ±2kV Line - Ground	Pass
EN61000-4-2 VVSG Vol. 1 4.1.2.8	Electrostatic Disruption	Normal Operation & No Data Loss	±8kV Contact ±15kV Air	Pass
EN61000-4-3 VVSG Vol. 1 4.1.2.10	Electromagnetic Susceptibility	Normal Operation & No Data Loss	10 V/m, 80 MHz – 1 GHz	Pass
EN61000-4-6 VVSG Vol. 1 4.1.2.11	Conducted RF Immunity	Normal Operation & No Data Loss	10 Vrms, 150 kHz – 80 MHz	Pass
EN61000-4-8 VVSG Vol. 1 4.1.2.12	Magnetic Immunity	Normal Operation & No Data Loss	30 A/m	Pass

Environmental Testing was performed on the D-Suite 5.17 components listed above. The procedures and results for this testing are included in the following NTS Test reports:

- TR-PR165251, Revision 0, presented in Appendix A-1

The test results from this testing are summarized in Table 3-3:

Table 3-3. Environmental Hardware Test Results

Standard/Method	Description	Criteria	Result
MIL-STD-810D, 501.2/502.2 VVSG Vol. 1 4.1.2.13, 4.3.3, VVSG Vol 2 4.7.1	Reliability, Temperature-Power Variation Testing	Normal Operation & No Data Loss	Pass

The Temperature/Power Variation Test was completed successfully without issue.

The Electrical Supply portion of the Electrical Testing was performed at Pro V&V's test facility. The components completed the test requirements successfully with no deficiencies noted. Test Result – PASS

3.1.7 Usability & Accessibility Testing

Usability & Accessibility testing was performed to evaluate the new D-Suite 5.17 System to the applicable requirements. The usability testing focused on the usability of the ICX. Usability is defined generally as a measure of the effectiveness, efficiency, and satisfaction achieved by a specified set of users with a given product in the performance of specified tasks.

During test performance, the voting system was configured as per the System TDP. This area of testing focused on the addition of the ICX.

Summary Findings

The D-Suite 5.17 System successfully met the requirements of the Usability & Accessibility evaluation.

3.2 Anomalies and Resolutions

When a result is encountered during test performance that deviates from what is standard or expected, a root cause analysis is performed. Pro V&V considers it an anomaly if no root cause can be determined. In instances in which a root cause is established, the results are then considered deficiencies.

Summary Findings

There were no anomalies encountered during this test campaign.

3.3 Deficiencies and Resolutions

Any violation of the specified requirement or a result encountered during test performance that deviates from what is standard or expected in which a root cause is established was considered to be a deficiency. Any deficiencies encountered were logged throughout the test campaign into the Pro V&V tracking system (Mantis) for disposition and resolution. In each instance, if applicable, the resolutions were verified to be resolved through all required means of testing (regression testing, source code review, and TDP update) as needed.

There were no deficiencies noted during this test campaign.

4.0 RECOMMENDATION FOR CERTIFICATION

The D-Suite 5.17 Voting System, as presented for testing, successfully met the requirements set forth for voting systems in the U.S. Election Assistance Commission (EAC) 2005 Voluntary Voting System Guidelines (VVSG), Version 1.0. Additionally, Pro V&V, Inc. has determined that the D-Suite 5.17 functioned as a complete system during System Integration Testing. Based on the test findings, Pro V&V recommends the EAC grant the D-Suite 5.17 System, as identified below, certification to the EAC 2005 VVSG.
